As per claims **30, 37 and 40**, Meushaw discloses a method, logic encoded in media and an apparatus for providing a general purpose computing platform at a router on a network, comprising:

- configuring a virtual machine on a router with a plurality of parameters (col. 4, lines 59-62 and col. 5, lines 34-50); and
- receiving, from a remote site, logic associated with a desired service to execute the desired service at the virtual machine (col. 5, lines 16-33).

Art Unit: 2157

- verifying that the virtual machine may host the logic and execute the desired service based on the parameters created during configuration (col. 4, lines 59-62 and col. 5, lines 34-50).

As per claim 2, Meushaw discloses wherein configuring the virtual machine on the router with the parameters comprises:

- allocating a processing resource operable to execute the logic on the virtual machine (col. 3, lines 56-65).

As per claim 3, Meushaw discloses wherein configuring the virtual machine on the router with the parameters comprises:

- allocating a processing resource operable to execute the logic on the virtual machine (col. 3, lines 56-65); and
- verifying that the virtual machine may host the logic based on the parameters created during configuration comprises determining whether the processing resource is available to execute the logic (col. 4, lines 59-62 and col. 5, lines 34-50).

As per claim 4, Meushaw discloses wherein configuring the virtual machine on the router with the parameters comprises:

- assigning a plurality of authorized credentials to the virtual machine (col. 4, lines 59-62 and col. 5, lines 34-50).

As per claim 5, Meushaw discloses wherein:

- configuring the virtual machine on the router with the parameters comprises assigning a plurality of authorized credentials to the virtual machine (col. 4, lines 59-62 and col. 5, lines 34-50); and

Art Unit: 2157

- receiving, from the remote site, the logic associated with the desired service to execute the desired server at the virtual machine comprises determining an address associated with the remote site (col. 5, lines 16-33).
- verifying that the virtual machine may host the logic an execute the desired service based on the parameters created during configuration (col. 4, lines 59-62 and col. 5, lines 34-50) comprises:
 - a. retrieving logic credentials for the logic from the remote site using the determined address (col. 4, lines 59-62 and col. 5, lines 34-50); and
 - b. comparing the authorized credentials with the logic credentials (col. 4, lines 59-62 and col. 5, lines 34-50).

As per claim 41, Meushaw discloses wherein receiving, from a remote site, logic associated with a desired service to execute the desired service at the virtual machine comprises:

- determining an address associated with the remote site (col. 5, lines 16-33); and
- retrieving a manifest for the logic from the remote site using the determined address, the manifest including a configurable object needed to execute the logic on the virtual machine (col. 5, lines 16-33).

As per claim 10, Meushaw discloses:

- wherein the virtual machine comprises a virtual interface including an address (col. 3, lines 47-65).

As per claim 11, Moir discloses:

- wherein the virtual machine comprises a virtual service including a plurality of addresses (col. 3, lines 47-65).

As per claim 12, Meushaw further discloses:

- loading default configuration parameters for the router (col. 4, lines 59-62 and col. 5, lines 34-50); and
- receiving a provisioning message to configure the virtual machine on the router (col. 4, lines 59-62 and col. 5, lines 34-50).

As per claims 31 and 39, Meushaw further discloses:

- allocating a processing resource operable to execute the logic on the virtual machine (col. 3, lines 56-65); and
- determining whether the processing resource is available to execute the logic (col. 4, lines 59-62 and col. 5, lines 34-50).

As per claims 32 and 38, Meushaw further discloses:

- assigning a plurality of authorized credentials to the virtual machine (col. 4, lines 59-62 and col. 5, lines 34-50);
- determining an address associated with the remote site (col. 5, lines 16-33);
- retrieving logic credentials for the logic from the remote site based on the determined address (col. 4, lines 59-62 and col. 5, lines 34-50); and
- comparing the authorized credentials with the logic credentials (col. 4, lines 59-62 and col. 5, lines 34-50).
